MPC's 3 Tier Bottle Roll Machine

Mineral Process Control has produced two versions of a three tier bottle roll machine. One version was constructed to be flat packed for shipment by air.

Each machine consists of 15 x 3m long rollers in three layers of 5. The rollers are rubber coated and each roller is chain driven.

The machine has a capacity of around 250 x 4.5L jars. The air freight version capacity is slightly less.

The machine can also accommodate 2L as well as 1L jars.

Power requirements for the standard equipment are 415VAC, 50Hz, three phase at 1.5KW. Other power supplies may be accommodated upon request.
